## ■ Tips when folding YUPO

◎ The grain runs along the first dimension listed in the label.
　(Example:460mm x 320mm → 460mm is grain direction)

◎ Forming crease line along the grain is recommended.

◎ Run the final fold parallel with the grain when folding several pages.

◎ After the paper has been discharged at delivery, there will be a tendency for YUPO products to unfold, but the folds will remain if pressure is applied for several hours using rubber bands, string or applying weight.
